

## Animated Travel Routes

## Step 1

Create a Photoshop Document with a map in the first layer, and another transparent layer that contains the line of the travel route.

## Step 2

Export each layer as a PNG file, thus preserving transparency. This is essential.

### Step 3

Add the first layer (containing the map) in FotoMagico. Apply any animation you may want.

## Step 4

Add the second layer (containing the travel route) on top of the first layer.

Copy the geometry of the first layer and paste it onto the second layer. Do this for both the start and finish, so that the animation matches for the map and the travel route.

## Step 5

Add a rectangular mask the travel route layer.  
The mask needs to be large enough to reveal  
the entire travel route.

Move the mask out of the way in the start  
position, so that the entire route is hidden at the  
start and revealed at the finish.

## Step 6

Give the mask a fuzzy edge  
by adjusting its softness.

## Step 7

Add a few title layers for cities on the route. A bullet character marks the city location. Restrict the layer visibility to an appropriate range.
